Investigation of manual transmission purpose is to train [mal year student for hands on and automotive investigation experience. In this investigation of manual transmission, two analyses have done. First analysis is about how gear ratio influence vehicle performance curve. Vehicle performances are determined not only by engine performance, but also by transmission gear ratios, differential gear reduction ratio, and tires. Second analysis is about size gear shaft, design of gear shaft is influence by size of vehicle. For example, truck and small car have different of size gear shaft. The second analysis prove why design of gear shaft influence by size of vehicle. Cosmoswork are using in second analysis for test Stress, deformation, strain, displacement in gear shaft at different size. Investigation of manual transmission need to documentation because it will be best reference for student who's involved in fabrication of manual transmission. This report have explain how to using Cosmoswork and calculation for produce vehicle performance curve from gear ratio. -Author. Includes list of replacement pages. Containing formulas and examples of both helical gear mathematics and the design of

helical gear teeth, this volume examines tooth forms produced by standard cutters with their application to differential and planetary drives. Succeed in the course, your future career, and the ASE A3 Manual Drive Train and Axles certification test with TODAY'S TECHNICIAN: MANUAL TRANSMISSIONS & TRANSAXLES, 6e.
